The 0.3.x release and Lisbon Privacy Café

2022-11-18

The upcoming presentation of Librevent in Lisbon, at the [Privacy Café](#), has forced to deliver some of the progress foreseen at the last Hackathon.

The 0.3.x release branch is the beginning of many parallel improvements! Get the browser extension for ([for Firefox](#), [for Chrome](#)), or download the [Zip file](#).

#2nd Adversarial Interoperability Hackathon

2022-09-22

Since version 0.2 of librevent we are moving to a more advanced design. In this hackathon we will address and discuss the limitations found in the previous model. We will discuss limitations (the use of our scripts is subordinated to having a fixed list of groups), technological (facebook's HTML is intentionally obfuscated to prevent any form of scraping) and usability, also because of the thoughts we had about the target audience.

A place for our experiments: mobilizon.libr.events

2022-09-18

We created a mobilizon instance to experiment. It can be used by anyone, but you should expect a lot of chaos there.

Who are we talking to

2022-09-01

We had the opportunity to reflect on the complexity of our message. We are talking to four different actors: **Facebook tolerant**, the **Facebook critics**, the **Advocate** and the **Followers**.

🌟 Gruppen entdecken

Explore the groups by clicking on the avatar to see its neighbors. You with **Ctrl + click** you can select multiple nodes of the network. Shown is a network of mobilizon groups. Groups are connected by edges if they have followers in common. The thicker the edges are the more follower they have in common. Double click on the group icon opens the group page.

Regaining control of our events with Mobilize.Berlin

Who are we?

We are a small but dedicated group of Berlin-based hackers & Free Software advocates, artists, journalists, creators, and so on. We want to support the music, club and party scene by providing a privacy-friendly event management platform run and managed by our own community.

One year ago we launched Mobilize Berlin, a community-driven platform to publish events based on the Free Software Mobilizon and part of the Fediverse*.

What is the problem?

Although many event managers support Mobilize Berlin and would love to stop using corporate data-mining services like Facebook Events, they also want to promote their events to as many possible concert and party-goers as possible. At the moment, this means promoting their events on multiple platforms at the same time.

What is the hackathon about?

First of all, the hackathon is a great opportunity to get to know each other. And become a community. We are happy to invite you to join our Hackathon to improve two Free Software tools for event publishers to manage their events across platforms, including **Mobilize Berlin**.

- **Mobilize-reshare** allows organizers to share events from Mobilizon on a broad selection of platforms (Facebook, Mastodon, Twitter, Telegram, Zulip), enabling automation of social media strategies and offering the possibility for people to attend an event without being forced to use a platform like Facebook (network effect).

The Critical Mass problem

https://en.wikipedia.org/wiki/Metcalfe's_law

The law has often been illustrated using the example of fax machines: a single fax machine is useless, but the value of every fax machine increases with the total number of fax machines in the network, because the total number of people with whom each user may send and receive documents increases. Likewise, in social networks, the greater the number of users with the service, the more valuable the service becomes to the community.

In a social network, number of nodes and number of content might be slightly equivalent: so, let's copy them outside of Facebook, or any other monopolist, and do what we call data liberation!

Experiment N. 1

 A browser extension to scrape events from Facebook

 And repost them in Mobilizone.

 Naming and design are still work in progress.

[Hybrid event, see registration info below]

Are you somewhat intrigued by the picture of the supermassive black hole in our own galaxy? Did you know there's a supermassive black hole in almost every galaxy? Join our lecture to learn how they grow and impact their hosts!

Supermassive black holes remain some of the most elusive engines in our Universe. However, after decades of observations and over 1 million of them cataloged, certain aspects of their formation and growth still remain unknown. In this talk, Dr. Adi Foord will discuss the effort to understand how supermassive black holes grow in and with their host galaxies, how they impact their surrounding environments in the process, and how mergers play an important role in their evolution. She will also comment on the recent imaging of the Milky Way supermassive black hole.

This event is *FREE*, open to all, and recommended for the general public and students above 9th grade. To register, please go to: https://bit.ly/KIPAC_2022June7. The event URL and location will be provided at the *bottom* of the EventBrite registration confirmation email. See less

Online

Facebook of course doesn't help

Heavily obfuscated HTML

Require some automated interaction but also be logged as Facebook user

In the hackathon you'll see how to scrape at the next level, and how to integrate with mobilizon API.

Push in mobilizon

The screenshot shows a Mobilizon event page for 'LOGOUT @Milano'. At the top is a large stylized logo in red and black. Below it, a date badge for '21 APR' is visible. The event title 'LOGOUT @Milano' is followed by the organizer '@tech_workers_coalition_italia' and hashtags '#ATTIVISMO' and '#TECHWORK'. A status bar indicates 'Evento già trascorso' (Event already over) and 'No one is participating'. The main description reads: 'Log Out è il ritrovo dei Tech Worker che dopo il lavoro vogliono incontrarsi. Un'occasione per socializzare, conoscersi, parlare del nostro lavoro o di qualsiasi altra cosa ci piaccia. Un incontro informale davanti ad una birra, un cocktail o una bibita per scaricare la stanchezza della giornata di lavoro.' Below this, it says 'Unisciti al gruppo Telegram!'. The 'Posizione' (Location) is 'Pianoterra Lab, 3 Via Federico Confalonieri (Milano)' with a 'Mostra mappa' (Show map) link. The 'Data e ora' (Date and time) is 'Il giovedì 21 aprile 2022 dalle 19:00 alle 23:59'. The event is organized by 'Tech Workers Coalition Italia @tech_workers_coalition_italia'. A 'Commenti' (Comments) section is at the bottom.

About

This is an unofficial Mobilizon group for events by the venue Suicide Club. This group is administered by the mobilize.berlin team. We invite Suicide Club to take over this group and to interact with their guests on mobilize.berlin. In case Suicide Club does not agree with the crossposting, please contact us and we will delete this group immediately.
